

The following Listing of Claims replaces all prior listings, and versions, of claims in the subject patent application.

**Listing of Claims:**

1-24. (Cancelled).

25. (Currently amended) A tape cassette for a tape printer, the tape cassette comprising a body having a base, a top, and sides extending from the base to the top, the body housing a roll of print receiving medium having an axis of rotation extending in a first direction from the base to the top, the body having a guide member on each of two opposing sides extending along said opposing sides in a second direction perpendicular to the first direction for guiding the tape cassette into a tape printer in the second direction and locating the tape cassette in the tape printer, wherein each guide member extends outwardly from its respective side of the tape cassette and comprises a first elongate member disposed in a plane perpendicular to a plane of its respective side and a second elongate member disposed in a plane parallel to the plane of ~~[[the]]~~ its respective side, said first elongate member having a first end attached to its respective side and a second end spaced from its respective side, and wherein said second elongate member is attached to said second end of said first elongate member and extends at least partially along a length of said second end, and wherein one of said sides of said cassette other than said opposing sides includes an opening at which ~~[[tape-passes]]~~ said print receiving medium is arranged to pass over a platen ~~[[in]]~~ of the cassette, each guide member extending from an end of its respective side opposite said side including the opening.

26-28. (Cancelled)

29. (Previously presented) A tape cassette according to claim 25, wherein each guide member has a substantially T-shaped cross section.
